Application: Coresight Market Data Portal (MDP)

Page name: Forecasting Admin

URL path: `/forecasting_admin`

Executive summary

Forecasting Admin is an **internal operator screen** that **syncs stored revenue forecasts** when annual actuals in MDP are newer than the last model run. Use it after large data loads or when analysts report stale numbers on the public [Revenue Forecasting](#) page.

Navigation status — important

Forecasting Admin is not listed in the main MDP navigation menu for most users.

Status	Detail
Page exists	Yes — maintained for forecast operators
Standard top menu	Not linked — users cannot open it from the everyday menu unless your deployment adds it
Direct URL	<code>/forecasting_admin</code> when your account has permission
Access control	Managed in Access Management under Forecasting Admin

What this means for you:

- **Analysts** should use [Revenue Forecasting](#) → **Refresh Data** for day-to-day single-company updates.
- **Platform admins** who need **bulk sync** use Forecasting Admin (or equivalent operator processes).
- Permissions can be granted before the page is added to navigation so teams are ready when it goes live.

Who this is for

Role	Access
Forecast administrator	Allow (or higher) on Forecasting Admin
Platform admin	Full operator access
Standard analysts	No access — use public Forecasting page

Grant access in [Access Management](#) → **Page Permissions** → **Forecasting Admin**.

What you'll learn

- When to use **Admin bulk sync** vs **Forecasting → Refresh Data**
- How **Sync all stale tickers** and **Sync this ticker only** work
- How to read the **results table** after a run

What the page does (plain language)

MDP stores pre-computed model outputs in a **forecast table**. When new **actual revenue** lands:

1. Forecasting Admin compares actuals to the last sync date
2. For **stale** tickers, re-runs the six-model engine
3. Writes fresh forecasts back to storage
4. Clears caches so [Revenue Forecasting](#) shows new numbers immediately

This is the **batch / operator** view. The analyst-facing **Refresh Data** dialog on the Forecasting page uses the **same engine** for individual tickers.

Page layout at a glance

INTERNAL • FORECAST STORE

Forecasting Admin

① Access Control — Page Permissions (admins, collapsed)

② Sync all stale tickers (primary action)

③ Sync this ticker only — text box + button

④ Results table — status per ticker

Screenshot pending — connect to staging data: Only the page header was captured in this environment; sync controls require forecast data and operator permission. Sections below match the live page.

Step-by-step — bulk sync after a data load

Step 1 — Open Forecasting Admin

1. Sign in with an account that has **Forecasting Admin** permission.
2. Navigate to `/forecasting_admin` (bookmark or admin link).
3. Confirm the header reads **Forecasting Admin** with **INTERNAL • FORECAST STORE**.

Step 2 — Sync all stale tickers

Click the large primary button **Sync all stale tickers**.

- Scans **all eligible** companies
- Updates only those whose actuals are newer than the last stored forecast
- Shows a progress indicator with the current ticker
- Displays summary metrics when finished:

Metric	Meaning
Upserted	Tickers freshly written
Already current	No change needed
Skipped / no data	Missing history or excluded
Errors	Failed tickers (see table)

Step 3 — Sync one ticker

Control	Example
Single ticker text box	TSCO
Sync this ticker only button	Runs one company

Use after fixing one name's reporting date or actuals.

Example: Enter `COST` after Costco annuals are loaded → click sync → verify on [Revenue Forecasting](#).

Step 4 — Read the results table

Column	Meaning
Ticker	Stock symbol
Company name	Display name
Status	<code>updated</code> , <code>up_to_date</code> , <code>skipped</code> , <code>error</code>
Rows upserted	Count written
Message	Human-readable detail

Access Control expander *(platform admins only)*

Administrators see **Access Control — Page Permissions** collapsed by default.

Inside:

Control	Purpose
Manage permissions for	Dropdown: Forecasting Admin, Retailer Adding, Company Filings File Manager
Stats	Total users, Allow count, Delete count
Add User	Email + permission + Add User
Current Users table	Change permission, Save , Remove

This mirrors [Access Management](#) for quick fixes without leaving the page.

When to use Admin vs Forecasting → Refresh Data

Situation	Recommended tool
One company after earnings	Forecasting → Refresh Data → Refresh Now
Nightly / weekly batch after data load	Forecasting Admin → Sync all stale tickers
New company added to coverage	Single-ticker sync on either page
Reporting date not set	Fix date first — sync stays on hold until then

Both paths call the same underlying sync services and clear forecast caches on success.

Access denied

If your permission was revoked:

Your access to run forecasting sync has been revoked. Contact an admin to restore access.

Contact an IAM admin listed in [Access Management](#).

Try it yourself

Exercise — verify single-ticker sync

1. Open [Revenue Forecasting](#) for **TSCO** and note **Last Refresh** (if shown in Refresh dialog) or ensemble values.
2. In Forecasting Admin, run **Sync this ticker only** → **TSCO**.
3. Return to Forecasting and hard-refresh the browser.
4. **Expected outcome:** Status **updated** or **up_to_date**; numbers unchanged if already current.

Frequently asked questions

Cannot find page in menu

Expected — use direct URL or request navigation to be enabled.

Sync returns **no_data**

Company lacks enough annual history in MDP.

Sync returns **error**

Check the message column — often a missing reporting date or actuals.

Forecasting page still shows old numbers

Hard-refresh the browser after sync completes.
