Application: Coresight Market Data Portal (MDP)

Page name: Live Earnings Transcript

URL path: `/live_earnings_transcript`

Executive summary

Live Earnings Transcript turns **recorded earnings call audio** into text you can read, copy, and export. Use it when you have a webcast recording or short audio clip and need a transcript quickly — for example before the call appears in the main **Earnings Calls** library. Text appears **after each audio clip finishes processing**, not word-by-word while someone is still speaking.

Who this is for

Audience	Typical use
Research analysts	Transcribe a recording when the official transcript is not yet published
Associates	Capture a short CEO quote from a mic clip during a live listen
Power users	Export Markdown , plain text, or JSON for downstream tools

What you'll learn

- When to use **browser mic** vs **file upload**
- How **Call Setup** metadata labels exports
- How the **Transcript Stream** stacks completed segments
- What this page is **not** (vs. the canonical Earnings Calls library)

What you can do here

- Enter **company ticker**, **quarter**, and **fiscal year** for labeled exports
- Record a **short segment** with the browser microphone
- **Upload** a WAV, MP3, M4A, or similar file for a full one- to two-hour call
- Add optional **Call context** (speaker names, product terms) to improve spelling

- **Start / End** a session timer; **Clear** to reset
- **Download** completed text as MD, TXT, or JSON

Page layout at a glance

The page splits into a **Call Setup** panel (left) and **Transcript Stream** (right), with session stats across the top.

Panel	Purpose
Session stats bar	Track segment count, word count, and elapsed timer.
Call Setup (left)	Enter company, quarter, year, and transcription settings.
Transcript Stream (right)	Read completed segments; export MD/TXT/JSON when content exists.
Whisper settings	Choose backend, model, device, and language for transcription.

Step-by-step walkthrough

Step 1 — Open Live Earnings Transcript

1. Sign in to MDP.
2. Navigate to **Live Earnings Transcript** (direct URL `/live_earnings_transcript` or from a link that includes `?ticker=...`).
3. Read the subtitle under the page title — it explains that **browser mic** suits short capture and **file upload** suits full calls.

The pill on the right shows **Timer off** or **Timer on (not live captions)**. The timer is for your reference; it does **not** mean words are streaming live.

Transcript Stream

Transcript text appears here after each file or finished mic clip is transcribed — not during recording.

> Pipeline log (verify transcription)

No segments yet. After each mic upload or file upload finishes transcribing, text shows here. Nothing streams live while you talk — only completed chunks.

Live Earnings Transcript — Call Setup and stream

Step 2 — Fill in Call Setup

Company / ticker

Enter the symbol — for example `AAPL` or `TGT` . MDP uses this in exports and saved transcript titles.

If you opened the page from another MDP screen with a ticker in the URL, the field may pre-fill.

Quarter and fiscal year

Field	Purpose
Quarter	Q1, Q2, Q3, or Q4
Fiscal year	Four-digit year (defaults to the current calendar year)

These labels appear in exported filenames — for example `AAPL_2024Q1_live_transcript.md`.

Transcript text appears here after each file or finished mic clip is transcribed — not during recording.

> Pipeline log (verify transcription)

No segments yet. After each mic upload or file upload finishes transcribing, text shows here. Nothing streams live while you talk — only completed chunks.

Live Earnings Transcript — Call Setup fields

Transcription backend

Option	When to use
Local faster-whisper	Default; runs on the server
OpenAI API	When your organization has configured an API key and you want cloud models

Additional settings appear based on your choice (model size, device, language). Most business users can leave defaults.

CONFIDENTIAL

Coresight Research — Internal Use Only

Page 7 of 14

Call context (optional)

Free-text notes — known speaker names, product lines, acronyms. This helps the engine spell company-specific terms correctly.

Example

For a Costco call, enter: CEO Ron Vachris, CFO Richard Galanti, membership fee, Kirkland Signature.

Step 3 — Add audio

Use the **Add audio** selector under **Audio Segment**:

Microphone (browser recorder)

- Record a **short clip** directly in the browser.
- After you **stop** recording, return to the page; MDP shows **Audio ready** and transcribes the clip.
- Suitable for quick capture — **not** recommended for an entire two-hour call (browser limits, tab focus, and upload size).

Upload audio file from computer

- Choose a file — WAV, MP3, M4A, WebM, OGG, or FLAC.
- Best for **full call recordings** exported from Zoom, Teams, or a dedicated recorder.
- Very large files may take several minutes to process.

Example — full call workflow

1. Record the Walmart Q4 webcast locally as WMT_Q4_2024.mp3.
2. Open **Live Transcript**, enter **WMT, Q4, 2024**.
3. Set **Add audio → Upload audio file from computer**.
4. Select the file and wait for the status spinner to finish.
5. Read segments on the right; download **TXT** for your notes.

Step 4 — Control the session

Button	Action
Start	Starts the elapsed timer (status pill turns on)
End	Stops the timer only — does not delete transcribed text
Clear	Removes all segments and resets the session

Start only affects the timer — you can upload audio whether the timer is on or off.

If upload seems stuck:

- Click **Reload run (pick up upload / refresh widgets)**.
- Or switch **Add audio** mode and re-select the file.
- Expand **Pipeline log** at the bottom of the left panel for status lines.

Transcript Stream

Transcript text appears here after each file or finished mic clip is transcribed — not during recording.

> Pipeline log (verify transcription)

Empty stream

No segments yet. After each mic upload or file upload finishes transcribing, text shows here. Nothing streams live while you talk — only completed chunks.

Live Earnings Transcript — pipeline log and empty stream

Step 5 — Read and export the Transcript Stream

Empty state (no audio processed yet)

When no segments exist, the right panel shows:

No segments yet. After each mic upload or file upload finishes transcribing, text shows here. Nothing streams live while you talk — only completed chunks.

This is **normal** — MDP is not a live closed-caption feed.

CONFIDENTIAL

Coresight Research — Internal Use Only

Page 10 of 14

After transcription

Each segment appears as a block with:

- Segment number
- Timestamp when the clip was processed
- Which transcription backend and model were used
- The transcribed text

Segments stack in order so you can read the call chronologically across multiple uploads.

Export downloads

When at least one segment exists, download buttons appear:

Format	Use case
Download MD	Markdown for internal wikis or note tools
Download TXT	Plain text for email or Word
Download JSON	Structured data for downstream tools

Filename pattern: `{TICKER}_{YYYYQn}_live_transcript.{ext}`

Example — share with a colleague

After transcribing a call tagged `ROST Q3 2024`, download **TXT**. The file name `ROST_2024Q3_live_transcript.txt` identifies the source.

Real examples

“Quick quote capture (short mic clip)”

1. Enter ticker and quarter.
2. **Add audio → Microphone.**
3. Record the CEO’s answer to one analyst question (under ~3 minutes).
4. Stop recording; wait for transcription.

5. Copy text from the segment block.

“Full call from a Zoom export”

1. Enter metadata and optional **Call context**.
2. **Add audio → Upload**.
3. Select your exported file; wait for processing (long files take longer).
4. **Download TXT** or **MD** when complete.

“Multi-part manual capture”

1. Upload or record **segment 1** → wait for text.
2. Upload **segment 2** → text appends below segment 1.
3. Repeat until the call is covered; export once at the end.

Try it yourself

1. Open **Live Earnings Transcript** and set ticker **TGT**, quarter **Q4**, fiscal year **2024**.
 2. Add **Call context** with two executive names and one product term.
 3. Record a 30-second mic clip or upload a short test audio file.
 4. Wait for a segment to appear in **Transcript Stream**.
 5. Download **TXT** before clicking **Clear**.
 6. Compare this workflow to opening the same quarter on **Earnings Calls** when the official transcript exists.
-

What this page is not

Expectation	Reality
Live ticker-style captions during the call	Text appears only after each clip is uploaded and processed
Automatic refresh from a live webcast URL	You must provide audio via mic or file upload
Guaranteed speaker names	Speaker labels are empty unless you add context notes; text is continuous per segment
Replacement for official Earnings Calls library	Published transcripts on Earnings Calls remain the canonical source when available

For published transcripts already in MDP, use [Earnings Calls](#) — search, PDF download, and cross-company keyword search are richer there.

Tips & gotchas

- **Clear** wipes everything; export before clearing if you need to keep text.
- Add **Call context** with ticker symbols and executive names to reduce spelling errors on financial terms.
- For hour-long files, prefer **upload** over dozens of short mic clips.
- Audio is **not stored as files on the server** after processing — only the transcribed text is kept in your session.
- Expand **Pipeline log (verify transcription)** if a clip returns empty text; **Run environment check** confirms server dependencies (primarily for support).

Quick reference

I want to...	Do this
Transcribe a short clip	Mic mode → record → stop → wait
Transcribe a full recording	Upload mode → select file → wait
Label the call	Set ticker, quarter, fiscal year
Improve spelling	Fill Call context with names and terms
Save the text	Download MD / TXT / JSON
Start over	Clear (export first if needed)
Official published transcript	Use Earnings Calls instead
