Application: Coresight Market Data Portal (MDP)

Page name: System Logs

URL path: `/logs`

Audience: Platform owner and IT operations only. This is **not** a business research tool. Standard MDP users do not need this page for day-to-day work.

What this page is

System Logs is a hidden diagnostic screen inside MDP. It lets the platform owner inspect server log files, run pre-approved diagnostic commands, and review environment configuration.

The page is registered in MDP but **not linked** from the standard user navigation menu. The application labels it *"NOT FOR PUBLIC ACCESS — Admin only debug tool."*

Who can use it

Access is intended for the **system owner** and designated IT staff. If you are a research analyst or business user, use the other guides in this folder instead.

What you will see (high level)

Area	Purpose
Log file browser	Find and open <code>server-log.log</code> and related files
Log viewer	Search and filter log lines by level, page, or text
System information	Host name, working directory, operating system details
Environment reference	Read-only list of common configuration keys
Owner commands	Pre-approved shell commands for troubleshooting

Screenshot pending: This guide intentionally omits UI screenshots. The Logs page is not part of business user training materials.

When to contact IT instead

Use your normal support channel if you need:

- Help with **login**, **permissions**, or **missing data** on business pages
- Investigation of **slow pages** or **errors** you see during research work
- Changes to **company coverage**, **filings**, or **forecasts**

The Logs page is for **infrastructure debugging**, not for fixing business data issues.
